Drug Utilization Research: insights and examples from Scotland

SPEAKER:

PROF. PhD TANJA MUELLER

After working as a community pharmacist in Germany for several years, she obtained an MPH from Lund University (Sweden) in 2014, and a PhD in Pharmacoepidemiology from the University of Strathclyde (Scotland) in 2017. Following graduation, she has been working at the Strathclyde Institute of Pharmacy and Biomedical Sciences in Glasgow, first as a postdoctoral researcher, and since April 2022 as a lecturer in Pharmacoepidemiology and Health Services Research. Her main areas of expertise are drug utilization research and Pharmacoepidemiology more widely, including the design, conduct, and analyses of cohort studies. Current research projects mostly focus on cancer and cardiovascular disease but have also covered issues as diverse as in-hospital treatment of patients with COVID-19 and competencies required for clinical pharmacists in General Practice. While mostly working with large data sets and applying a range of statistical methods, she is also involved in mixed-methods research.
